"Purification and primary structure of a polypeptide with
multiplication-stimulating activity from rat liver cell cultures.

Homology with human insulin-like growth factor II.";

J. Biol. Chem. 256:6859-6865(1981).

-i- FUNCTION: The insulin-like growth factors possess growth-promoting
activity. In vitro, they are potent mitogens for cultured cells.

IGF-II is influenced by placental lactogen and may play a role in

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 11728, Application US/09489039A
PAtent No. 6610836
GENERAL INFORMATION:
APPLICANT: GATY Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQ
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 11728
LENGTH: 261

Published_Applications Mucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases: older published applications make up the Published_Applications_New databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions trupbm (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions.

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions.

Tapbm (Published_Applications_AA_Msin) and .rapbn (Published_Applications_AA_New).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               insulin synthesis; type II diabetes;
```

The present sequence represents a rat preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA

(undefined) or Enzyme linked immunoabsorbant

assay

New mammalian peptide with preptin functionality, useful for or treating Type 2 diabetes mellitus by stimulating insulin s

r preventing secretion.

          proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           peripheral nervous system injury; Alzheimer's disease; parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathy; myocardiopathy; myocardial infarction; cardiac disease; acute renal insufficiency; ischaemia; antidiabetic; vulnerary; antiuleer; antinflammatory; gastrointestinal; nootropic; neuroprotective; antiparkinsonian; cerebroprotective; muscular; cardiant; nephrotropic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    quantitatively measuring preptin in a biological fluid preferably in cerebrospinal fluid. Agonists or antagonists of preptin peptides are useful for modulating glucose mediated insulin secretion
                                                                                                 The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM35841-ADM35843), preptin analogues, preptin gonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts.
                                                                                                                                                                                                                                                       Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction,
                                                                                                                                                                                                                                                                                                                                                                                                                                    01-AUG-2002; 2002NZ-00520536.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC insulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They CC may also be used for treating and/or preventing peripheral nervous system CC injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic CC lateral sclerosis; muscular dystrophy, diabetic neuropathy; CC myocardiopathies such as myocarditis and myocardial infarction; cardiac CC disease and acute attack; and acute renal insufficiency caused by CC ischaemia. They are additionally useful for increasing or maintaining CC beta-cell mass or beta-cell number; for stimulating beta-cell CC coll mass or acell differentiation or neogenesis; for increasing type CC coll mass via cell differentiation or neogenesis; for decreasing type CC death of motor neurons; for increasing muscular end plates; promoting the CC functional recovery of damaged sciatic nerves; preventing peripheral CC motor paralysis during or as a result of chemotherapy; and for improving CC myocardial function. The present sequence represents rat preptin, which cross specifically claimed for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or

                                                                                                                           modified expression in fetal heart tissue as compared to adult heart tissue and the encoded proteins (ABB57375-ABB57392). The genes have cardiant activity and may be useful in the promotion of the repair of damage to heart tissue caused by myocardial necrosis. The gene sequences are useful for screening potential compounds for the ability to influence disease associated with myocardial necrosis. Drugs identified by the screening methods may be used to treat and prevent disease with which myocardial necrosis is associated, such as cardiac hypertrophy and cardiac insufficiency. Diagnosis of diseases such as those above is also disclosed. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                           Sequence 180 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genes having differential expression useful for screening potential drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imporfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the rat preptin peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                        The invention relates to gene sequences (ABI99915-ABI99934) having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27-APR-2000; 2000JP-00126741
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-APR-2001; 2001WO-JP003700

                                                                                                                                                                                                         The present sequence represents a mouse preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (RIA), for quantitatively measuring preptin in a biological fluid preptin peptides are useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bioactive peptide; preptin; pancreatic islet beta-cell; glucose-mediated insulin secretion; insulin synthesis; t

The invention relates to a method for treating a disorder mediated by CC pancreatic islet beta-cells or beta-cell dysfunction by administering CC properties (ADM35841), preptin analogues, preptin agonists or CC salts or derivatives thereof. Preptins are able to stimulate the CC proliferation and differentiation of beta-cells and fibroblasts. CC Preptins, preptin analogues, preptin agonists, their salts and CC derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane CC disruption); conditions characterised by decreased beta-cell mass or CC number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); CC and conditions characterised by insulin resistance, undesirably low consulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They compared the conditions characterised by insulin resistance, undesirably low conjury; Alzheimer's disease, Parkinson's disease; stroke; amyotrophic conjury; Alzheimer's disease, Parkinson's disease; stroke; amyotrophic conjury; Alzheimer's disease, Parkinson's disease; stroke; amyotrophic conjury; Alzheimer's and acute renal insufficiency caused by ischaemia. They are additionally useful for increasing or maintaining cell differentiation or neogenesis; for increasing type cell mass via cell differentiation or neogenesis; for decreasing type functional recovery of damaged sciatic nerves; preventing peripheral consocratical function. The present sequence represents mouse preptin, which is specifically claimed for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathy; myocardiopathy; myocardiopathy; myocardial infarction; cardiac disease; acute renal insufficiency; ischaemia; antidiabetic; vulnerary; antiulcer; antiinflammatory; gastrointestinal; nootropic; neuroprotective; antiparkinsonian; cerebroprotective; muscular; cardiant; nephrotropic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proliferation; differentiation; beta-cell disorder; diabetes; insulin resistance; insulin resistance; insulin secretion disorder; hyperglycaemia; wound; burns; ulcer; mucous membrane disruption; peripheral nervous system injury; Alzheimer's disease;

                                                                                                                                                                                                                                                                              This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or

                                                                                                                                                                                                The present sequence represents a human preptin peptide. The peptide corresponds to Arg69-Leul02 of the proider II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (ELISA) for quantitatively measuring preptin in a biological fluid preferably in cerebrospinal fluid. Agonists or antagonists of preptin peptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glucose-mediated glucose mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAB31481 standard;

Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction, ulcers or inflammation. e.g.

WPI; 2004-157011/15

Claim 2; SEQ ID NO 1; 63pp; English

cc pancreatic islet beta-cells or beta-cell dysfunction by administering cc preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or crivatives thereof. Preptins are able to stimulate the cc proliferation and differentiation of beta-cells and fibroblasts. CC Preptins, preptin analogues, preptin dyonists, their salts and cc derivatives are useful in the treatment of internal or external injuries cor wounds (e.g., burns, ulcers, surgical wounds or mucous membrane cc disruption); conditions characterised by decreased beta-cell mass or cr number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); and conditions characterised by insulin resistance, undesirably low cc may also be used for treating and/or preventing peripheral nervous system ci njury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic disease and acute attack; and acute renal insufficiency caused by cischaemia. They are additionally useful for increasing or maintaining cell disease or beta-cell number; for stimulating beta-cell cell differentiation or neogenesis; for increasing type call mass via cell differentiation or neogenesis; for increasing type call mass via cell differentiation or neogenesis; for increasing type call mass via cell differentiation or neogenesis; for increasing type call mass via cell differentiation or neogenesis; for increasing type call death of motor neurons; for increasing muscular end plates; promoting the motor paralysis during or as a result of chemotherapy; and for improving myocardial function. The present sequence represents human preptin, which is specifically claimed for use in the method of the invention.

                                                                                                                           stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the human preptin peptide of the invention.

                                                                                                                                                                                                                                                                                                The present invention describes a modified therapeutic peptide (I) CC comprising a therapeutically active amino acid region (III) and a CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to CC a less therapeutically active amino acid region (IV), which covalently CC bonds with amino/hydroxyl/thiol groups on blood components to form a CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids. CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth CC factors and neurotransmitters, to protect them from peptidase activity in CC vivo for the treatment of various disorders. Endogenous therapeutic CC peptides are not suitable as drug candidates as they require frequent CC administration due to rapid degradation by peptidases in the body. CC Modifying and attaching therapeutic peptides to albumin prevents or CC reduces the action of peptidases to increase length of activity (half CC life) and specificity as bonding to large molecules decreases CC intracellular uptake and interference with physiological processes. CC AAB90829 to AAB92441 represent peptides which can be used in the CC exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to polynucleotide and polypeptide sequences for a novel insulin homolog referred to as Zins3. The polynucleotide sequences encoding the Zins3 polypeptides are located on chromosome 12. The present invention also includes antibodies to the Zins3 polypeptides. The Zins3 polypeptide and polypeptide sequences of the invention are useful for identifying and isolating receptors involved in growth and differentiation of Zins3 responsive cells. This sequence represents human insulin growth factor 2 (IGF2) that shows homology to human Zins3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conklin DC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           04-MAR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IN9900401-I4

The protease hydrolyzes the target substrate and eliminates or reduces one or more biological activities, physico-chemical properties or pharmacological properties of the target protein and/or activates or increases one or more biological activities, physico-chemical properties or pharmacological properties of the target protein, and/or adds one or more biological activities, physico-chemical properties or pharmacological properties of the target protein, and/or adds one or more biological activities, physico-chemical properties or pharmacological properties to the target protein. The protease may be administered to treat immune disorders, inflammatory disorders, musculoskeletal diseases, dermatological diseases, gastrointestinal diseases, endocrine diseases, metabological diseases, gastrointestinal diseases, endocrine diseases, metabological diseases, femantological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for a target substrate for preparing a medicament for the treatment of a specific disease related to the target substrate. The invention also relates to a pharmaceutical or disgnostic composition comprising one or more enzymes in the use cited, optionally comprising pharmaceutically or diagnostically acceptable carriers, excipients and/or auxiliary agents, a method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use mentioned, and a method for treatment of a disease in a patient connected mentioned, and a method for treatment of a disease in a patient connected

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chiariotti, L.; Brown, A.L.P.; Frunzio, R.; Clemmons, I ol. Endocrinol. 2, 1115-1126, 1988; Title: Structure of the rat insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cross-references: UNIPARC:UPI00000E6983; GB:M38688; NID:g204925; PIDN:AAA41433.1; PID;Comment: Although structurally and functionally related to insulin, the insulin-like of the comment of the functions appear to differ. IGF-II is influenced by placental lactogy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Status: preliminary; translated
